This book is the best of the home distilling books I have read...By Carol L.I'm a total novice to distilling spirits and I have been looking for a "step-by-step" guide on the distillation of spirits to get me started. This book is the best of the home distilling books I have read. It contains a good assortment of

mash recipes, advice and warnings for the novice moonshiner. This guide does get technical and I found that to be a bit intimidating, but distilling is a science as well as an art so be prepared to recall your high school chemistry classes. Whiskey making is an art and art is never created by rote. This guide will serve well to encourage those interested in the art of distilling spirits. 3 of 3 people found the following review helpful. Left wanting much more....By Brett Davis Very basic distilling advice, most of which I already had learned. The section on bacteria was interesting but it seems to just scratch the surface. For being a master distiller I would think the author could cover topics much more in depth. That being said, I really only ordered the book for the recipes included. As far as those go, they seem like a great place to start. Nothing too complicated and very straightforward. I intend on using them as building blocks for my own development. I would recommend this book for novice distilling advice, not much more than that. 0 of 0 people found the following review helpful. Good intro to distilling. By Brian C Easy read with lots of basic information to begin the journey into learning how to make whiskey. Author does get into the science of ester formation and how it influences the taste of whiskey but at a level that is easy to follow and interesting. Few typos but barely noticed them especially as I neared the end of my rye whiskey neat.

Everything you need to know to ferment and distill whiskey right the first time. A fun read, salt and peppered, with the science behind distilling. This authoritative guide book introduces whiskey-making in a easy step-by-step process.

About the Author Written by: "One of the most raved-about young distillers in the U.S." — GQ Bryan Davis is a well known distiller, working out of California. His work has been featured in Wired, Wine Enthusiast Magazine, The Huffington Post, the NY Times, Forbes, GQ, and countless other publications. Currently he is working as head distiller of Lost Spirits a boutique distillery in California. In this book he takes you through the basics of making great whiskeys and moonshines in the comfort of your own home. The book may be small, but that is because it is clear and to the point. It explores the critical science in just enough detail to take your home whiskey making (moonshining) to a whole new level.
